

VALCHROMAT VISUAL APPEARANCE

SUPPLIER'S DECLARATION

Valchromat is a medium density fiberboard with improved mechanical properties, moisture resistant and coloured through out the mass.

Valchromat is a wood based panel and has in its composition pine wood fibers, resins and organic dyes.

The wood natural colour will affect the product final colour. These small colour variations are a characteristic of Valchromat giving it a unique organic appearance.

Due to its industrial sanding process it is possible that some stripes might be seen on the board surface.

This stripes are easily removed with the light polishing made before applying the varnish that can be used to finish the boards.
